**EST**

**Technology and Society**

**EST 500: Foundations of Educational Technology for Administrators**
This course is designed to teach administrators basic principles surrounding educational technology throughout the school and/or district. Students will explore and discuss critical issues surrounding technology in education. Students will understand administrative technology applications, web 2.0 presentation tools, Internet protocol, cyber safety and cyber bullying, Google Apps, social networking, collaboration tools, portable devices and aptivities. The semester project for this course is the development of a needs assessment and research of an educational technology for your school/district.

*3 credits, Letter graded (A, A-, B+, etc.)*

**EST 501: Educational Technology Integration for Administrators**
This course is designed to teach administrators how to integrate educational technology within their school/district. Students will understand ISTE Technology Standards for Administrators, the National Technology Plan and the Common Core Standards in relation to educational technology. Students will explore distance education, media streaming and communication tools such as Twitter and Facebook. They will review management systems, data collection/analysis tools and technology funding resources. Students will also learn how to evaluate technology integration throughout their school and/or district. The semester project for this course is the development of an implementation plan and the evaluation of an educational technology that may be used in your school or district.

*3 credits, Letter graded (A, A-, B+, etc.)*

**EST 508: Projects in Global Operations Management**
This is a capstone course. Students will demonstrate what they have learned during their masters studies. This course will review several significant research areas in modern Global Processing Management Operations. Topics include Performance Management, Lean Management, Six Sigma Management in conjunction with Cloud Computing and Cloud computing applications. The students will be given a selected case study and asked to demonstrate their knowledge by proposing a comprehensive technical and management solution. Students will use software engineering tools such as Data Flow Diagram (DFD) and Unified Modeling Language (UML) to analyze and design an implementation plan using cloud computing infrastructure, platform and services.

*3 credits, Letter graded (A, A-, B+, etc.)*

**EST 510: Fundamentals of Technology in Higher Education**
Higher education is impacted by technology on an ever changing scale. Students are bringing in new technology every day. This course will show higher education instructors what technology is available, how higher education students are using technology and offer innovative ways to use that technology to motivate students to learn. Throughout the course students learn about best practices in higher education, a number of web based productivity and course management tools, cyber-ethics and digital footprint, organization of your digital world, collaborating with technology, social media, virtual worlds as well as presentation strategies and tools. The culminating project for this course is the research, assessment, analysis and presentation of a college student profile. Semesters offered

*Fall, Spring, 3 credits, Letter graded (A, A-, B+ , etc.)*

**EST 511: Infusing Technology into Higher Education Curriculum**
The power of technology allows higher education instructors to teach and motivate students to learn in ways never thought possible. This course will show students how to fully integrate technology into the curriculum. For the semester project, students will review and modernize an existing course to make learning more effective and exciting for the higher education student. Students will learn the best way to update courses by understanding different instructional design models, content management systems and the Google Apps for Education suite.

Students will enhance his/her web presence and digital profile by harnessing the power of social media and personal learning networks. Students will also explore potential technology grant opportunities for his/her curriculum, department or instructional area. Semesters offered,

*Fall, Spring, 3 credits, Letter graded (A, A-, B+ , etc.)*

**EST 516: Science for Society I**
This is part one of an interdisciplinary course sequence (1 credit each) designed for students in computer science (CS) and students of technology and society (DTS). Students taking this course will enhance their abilities to critically think and build awareness for science and technology (ST) and their societal aspects. They will learn strategies for assessing important questions such as: what should I focus my efforts on, where are societal needs, what policies are required or can be taken advantage of, how can I possibly influence policy, and finally, what are the dangers when developing new ST. To teach these topics the course takes a practical approach. The first section of the sequence examines historical science and technology successes and failures. Then, in the second section, teams composed of students from both the CS and DTS departments conduct case studies of existing ST or design and implement new ST under the perspectives of the course. 1 credit

*1 credit, Letter graded (A, A-, B+, etc.)*

**EST 517: Science for Society II**
This is part two of an interdisciplinary course sequence (1 credit each) designed for students in computer science (CS) and students of technology and society (DTS). Students taking this course will enhance their abilities to critically think and build awareness for science and technology (ST) and their societal aspects. They will learn strategies for assessing important questions such as: what should I focus my efforts on, where are societal needs, what policies are required or can be taken advantage of, how can I possibly influence policy, and finally, what are the dangers when developing new ST. To teach these topics the course takes a practical approach. The first section of the sequence examines historical science and technology successes and failures. Then, in the second section, teams composed of students from both the CS and DTS departments conduct case studies of existing ST or design and implement new ST under the perspectives of the course. 1 credit

*1 credit, Letter graded (A, A-, B+, etc.)*

**EST 520: Computer Applications and Problem Solving**
A problem-solving course for professionals who use applications software to address administrative and managerial problems. Students develop skills in planning, forecasting, and MIS requirements. The major applications software packages used are Excel and Access. Students learn to create advanced-level spreadsheets and data files, and use them to find optimal solutions to problems in all professions.

*Summer, 3 credits, Letter graded (A, A-, B+, etc.)*

**EST 521: The Social and Global Impact of Technology in Education**
This course will explore educational systems and practices globally and how the use or lack of use of technology within education impacts
plan. In addition, students will learn how to develop a comprehensive knowledge of a Google Apps account and domain. They will also develop a plan to integrate one of the Google Apps products into an educational environment.

3 credits, Letter graded (A, A-, B+, etc.)

EST 526: Google Apps for Education

Certified Trainer: Curriculum Integration

In this course, students will learn how to fully integrate the Google Apps products into education including YouTube, Blogger, and Google+.

Students will explore educational best practices and examples of materials needed to submit the application for a Google Certified Trainer. Students will create a video biography, instructional video, case study, and additional training materials. Students will also participate in a Google EdOnAir Hangout. The culminating activity of this course is the submission of the completed application and all related materials.

3 credits, Letter graded (A, A-, B+, etc.)

EST 527: The Impact of Mobile Devices and Cloud Based Systems in Education

We are living in a hyperconnected world which allows us instant access to information from anywhere using mobile devices and cloud based technologies. In this course students will learn about what these technologies are, the power they have and what it takes to integrate them into the curriculum. Students will explore a multitude of educational apps, design an app with a corresponding aptivity and design a cloud based lesson. Students will also learn how to integrate, sync and deploy a number of mobile technologies within the educational environment including, iPads, Android tablets, Windows Surface tablets, Ultrabooks and Chrome Books. The culminating project for this course is to assess needs, research and develop a plan to integrate one of the mobile technologies within an educational environment.

3 credits, Letter graded (A, A-, B+, etc.)

EST 528: Teaching with Interactive Whiteboards and Immersive Technologies

Interactive whiteboards and other immersive technologies have changed the way educators deliver instruction. They are a technology that has enormous potential to impact student learning in a hands-on, kinesthetic way. Throughout this course students will explore best practices using immersive technologies within education. Students will learn how to effectively integrate interactive whiteboards, interactive projectors and cameras, learner responses systems, document cameras as well as other technologies. The culminating project for this course a comprehensive lesson plan that now seamlessly integrates into curricula and subject technology needs. Students will meet with a group of Math and Science educators, assess their needs, design an educational technology workshop focused on the Math and Science Core Curriculum and subject related needs. Students will meet with a group of Math and Science educators, assess their needs, design an educational technology workshop around those needs and deliver the workshop to the educators. The culminating activity for this course is to conduct the developed workshop to a group of Math and Science educators. After the delivery of the workshop, students will work with the instructor and classmates to evaluate the delivery and content of the lesson as well as assess the outcome and results of educator learning.

Fall, Spring, and Summer, 3 credits, Letter graded (A, A-, B+, etc.)
utilizing immersive technology hardware and the associated software within the curriculum. 3 credits, Letter graded (A, A-, B+, etc.)

**EST 529: Supporting Common Core Standards Using Educational Technology**

In this course students will learn how to support Common Core Standards through the infusion of educational technology by identifying, sharing, and exploring technology tools that support all curricula. Students will unpack the Common Core Standards and analyze and discuss best practices that effectively integrate technology to promote rigorous teaching and learning. The culminating assignment for this course is the design, delivery, reflection, revision and presentation of your technology infused Common Core lessons 3 credits, Letter graded (A, A-, B+, etc.)

**EST 530: Internet Electronic Commerce**

Topics addressed in this course include: technology infrastructure, business models and concepts, technological skills needed to build an E-Commerce web site, marketing, communications, security and encryption, payment systems in E-Commerce/M-commerce. Financial transactions, advertising models, content ownership and the prospects for E-Commerce are also covered. Summer, 3 credits, Letter graded (A, A-, B+, etc.)

**EST 531: Virtual Distance Management Course**

In today’s global corporations, the challenges associated with leadership and management have grown increasingly difficult and complex. More and more, companies are using networked organizational models to deliver work and interact with customers. As globalization and diffused networks of people and companies combine, issues related to virtual/distributed employees, partners and customers have moved front and center. Implications for leadership have grown beyond current skill sets drawn from traditional academic fields and training programs. The Virtual Distance Management course offers business students a powerful model and a set of proven practices to address these challenges in a unique way. Students will learn to: Understand and diagnose barriers to effective communication Develop ways to work with others using virtual technologies and social media Contribute to high performance, cross-discipline and cross-cultural teams Management strategies for the globally distributed workforce Virtual Distance, pioneered by Karen Sobel Lojeski is a conceptual as well as quantitative approach that helps to explain organizational behavior changes when much of our communications are electronically mediated. Understanding these changes and how they impact organizational outcomes is critical to leaders and managers around the world. During this course, students will be exposed to both theoretical models and real-life case studies to more fully develop knowledge and skills for working in the digital age. Students will gain an in-depth understanding of Virtual Distance and how this growing phenomenon impacts critical success factors such as productivity, innovation, and employee engagement and satisfaction. Students will also get hands-on experience with Virtual Distance Index data. Drawing from over 600 project teams from around the world, students will learn how to interpret Virtual Distance data 3 credits, Letter graded (A, A-, B+, etc.)

**EST 534: The Lean Launch Pad: Turning a great idea into a great company**

This course provides real world, hands-on learning of what it’s like to actually start a high-tech company. This class is not about how to write a business plan, and the end result is not a PowerPoint presentation to venture capitalists. Instead, students will get their hands dirty talking to customers, partners and competitors as they encounter the chaos and uncertainty of how a startup actually works. Students work in teams learning how to turn a great idea into a great company. They will learn how to use a business model to brainstorm each part of a company and customer development to get out of the classroom to see whether anyone other than themselves would want/use their product. Finally, they will see how agile development can help them rapidly iterate their product to build something customers will use and buy. Offered in Fall and Spring. 3 credits, Letter graded (A, A-, B+, etc.)

**EST 535: Electric Power Systems**

This course introduces concepts in the design and operation of electric power systems including generation with focus on renewable power, transmission and distribution, and end use; key issues and challenges facing electric power industry. Topics include electric and magnetic circuits, fundamental of electric power, circuit and load analysis, reliability, planning, dispatch, integration of renewable power, organizational design, regulations, environment, end-use efficiency, new technologies, and other cross-cutting issues 3 credits, Letter graded (A, A-, B+, etc.)

**EST 540: Environmental Management**

This is an introduction to environmental management, and will focus on the interplay between science and public policy. Concepts include problem identification and definition, collection and analysis of relevant data to produce information, and the roles of public perception and action in ultimately determining outcomes when consensus is not reached. Specific fields to which these concepts will be applied will be solid waste management and coastal management. Current local problems will be used to illustrate the broader conceptual issues. Offered as MAR 514, EST 540 and CEY 501. Prerequisite: Permission of instructor Offered in Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**EST 541: Long Island’s Groundwater**

This course will cover basic groundwater concepts in unconsolidated sediments, and examine contamination issues in light of Long Island’s particular hydrogeology, land use, and waste management history. Mathematical principles will be discussed but not stressed; scientific and technical papers discussing particular concepts or problems, including important local examples, will be closely read. Prerequisite: Permission of instructor. Offered as MAR 521 or HPH 673. Offered in Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**EST 542: Water and Wastewater Engineering Practices**

This course will provide basic engineering concepts and practices associated with water supply and wastewater management, with an emphasis on New York metropolitan area technologies. Topics covered will include water supply and distribution, wells, water quality testing and regulation, onsite, package and standard wastewater treatment, and stormwater collection. Policy issues considered will include source water protection and wastewater impact mitigation programs. Offered in Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**EST 546: Integrating Technology, Policy and Financing Instruments to Catalyze Climate Finance**

The sums involved in a shift to a low-carbon society are daunting but not impossible to achieve. The world is planning to invest over $15 trillion in fixed-asset investments
in the next 10 years. Rather a problem of capital generation, the key challenge of financing the transition towards a low carbon society is to redirect existing and planned capital flows from traditional high-carbon to low-carbon investments. This course is designed to allow students to: (1) Review a number of public policies, public finance mechanisms and market-based instruments designed to shift investments from fossil fuels to more climate friendly alternatives over the past few years; (2) Gain knowledge of the global commercial, political, innovation and technological challenges and opportunities in the transition to a low-carbon society; (3) Develop and practice professional skills in raising and spending public finance to catalyze capital towards low carbon and climate resilient development; and (4) Develop and practice professional skills in accessing carbon finance and designing innovative financing instruments. This course is aimed at engineering students who are interested in the energy challenges in a carbon-constrained world and their implications to technology innovation; at business-and public-administration students and at mid-career professionals who want to develop innovative financing solutions to real-world energy and environmental problems. Offered: Summer

**Fall, Spring, 3 credits, Letter graded (A, A-, B+, etc.)**

**EST 547: Advanced Problems in Integrated Planning: Theory, Practice, and Analytical Tools**

This course explores in depth new theories and practical applications of integrated planning through the lens and land use, transportation and urban infrastructure systems. A series of problem sets is undertaken in close coordination with the instructor to produce a portfolio of networked research which, with further research, can be publishable quality.

*Offered Summer, 3 credits, Letter graded (A, A-, B+, etc.)*

**EST 550: Introduction to Homeland Security**

The course is a combination of lectures and laboratory experience to introduce students to critical issues and assess needs for homeland security. The course includes invited lectures by experts on special topics such as fundamentals of nuclear, chemical, and biological weapons and the associated threat to the transportation of goods and the public. The students will learn about cyber security, devices to safeguard materials from terrorist threats, safety of nuclear power plants and water supply, forensics and emergency preparedness. The students will submit a term paper on a selected topic in lieu of the final exam.

**Prerequisites: Undergraduate level biology, chemistry and physics.**

*Fall and Spring, 3 credits, Letter graded (A, A-, B+, etc.)*

**EST 551: Leveraging the Atom in the Nuclear Age**

This graduate course evaluates change in nuclear and radiation technology amidst the interplay of societal priorities. Beginning with speculative problems in physics and late 19th century discoveries, the course explores ways in which defense, energy, medicine, and diplomacy influenced or were influenced by nuclear and radiation developments. Decision-making is a central theme. Coverage includes the Manhattan Project, Cuban Missile Crisis, and major accidents. Graduate students from all disciplines are welcome. Those specializing in the health sciences, energy-environmental systems, physics, and/or technology and society are especially encouraged to join. Interested undergraduate students require instructor permission to join.

*3 credits, Letter graded (A, A-, B+, etc.)*

**EST 553: Nuclear Security**

The course will familiarize students with the fundamentals of nuclear physics, radiation, mining, weapons and fuel cycle, other than producing electricity, as it pertains to nuclear power plants. Topics include nuclear detection, devices to safeguard nuclear materials from terrorist threats, needed physical protection for safe handling and its relevance to Homeland Security. The course combines lectures with hands-on experience at the newly installed nuclear detection facility located at the nearby United States Department of Energy's Brookhaven National Laboratory. Prerequisite: Undergraduate equivalent physics and chemistry.

*Fall, Spring, 4 credits, Letter graded (A, A-, B+, etc.)*

**EST 555: Preventing Weapons Proliferation**

The student will learn: what some of the key international tools to stem weapons proliferation are, how they have developed over the last 50 years, and how they work; the kinds of technologies used to develop nuclear, chemical, or biological weapons & missile delivery systems; and the complexities & methods of controlling these technologies. The student will also learn about the use of UN Security Council sanctions, and about multilateral [e.g., EU, ECOWAS] and national sanctions; and about how interdicting illicit transfers does or does not work. The course will emphasize how technology, international law, and international and domestic politics all play important roles in the evolution, current practice, and effectiveness of the international nonproliferation regime.

*3 credits, Letter graded (A, A-, B+, etc.)*

**EST 556: Nuclear Nonproliferation & International Safeguards**

The student will learn the history of the nuclear nonproliferation regime since 1946, with emphasis on the evolution of concepts & practice. The student will also learn the variety and complexity of motivations for governments to seek nuclear weapons, and in many cases, to forswear nuclear weapons. The course will emphasize how nuclear energy technologies, verification technologies, international legal practice, and politics all play important roles in the evolution, current practice, and effectiveness of the international nuclear nonproliferation regime.

*3 credits, Letter graded (A, A-, B+, etc.)*

**EST 557: Nuclear Energy—the nuclear fuel cycle & technologies**

Nuclear energy has many applications beyond the well known (and controversial) civil nuclear power plant. These applications include medical and industrial isotope production, research reactors, particle accelerators, propulsion reactors, and nuclear weapons. Supporting these applications is a complex infrastructure involving several diverse scientific, engineering, and industrial processes. One of the key processes is the nuclear fuel cycle, involved principally in civil nuclear power and related civil nuclear activities, from uranium mining to spent fuel reprocessing. However, the same set of technologies can be used to manufacture nuclear weapons # thus these technologies become a double-edged sword. This course provides a comprehensive first look at this
A decision support system (DSS) is a computer system that combines data, analytical tools, and models to support decision making. A DSS may be model-driven or data-driven. A model-driven DSS is a stand-alone system that uses some type of model to perform what-if and other kinds of analysis. A data-driven DSS is a system that supports decision making by allowing users to extract and analyze useful information that was previously buried in large databases. In this course, both model-driven and data-driven decision support services will be considered. Students will identify an appropriate engineering or management application. By collecting relevant data, building suitable mathematical models, designing an accessible user interface, and connecting these components via computer code, students will develop a deliverable DSS. Through a series of presentations, they will demonstrate how their DSS addresses the stated engineering or management problem. In doing so, students will gain insight into the interrelationships among information systems, statistics and management science.

Prerequisite: EMP 504 or permission of instructor
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EST 563: Computer Literacy for Educators
This course is an introduction to computer and software basics and was formally listed as EST 583. Students will develop an understanding of the underlying concepts and principles behind computers. Students will gain sufficient knowledge to successfully navigate the digital world. Emphasis will focus on computer literacy areas used in education and other professional environments. Students will leave this course with the ability to grasp the risks and benefits surrounding new and current computer technologies. The following skills will be addressed: electronic communication, application-based projects, information management, assessment, and the societal impacts of computer-based technologies. Students having completed EST 565 in a prior semester can not receive credit for EST 563. EST 563 and EST 565 may be taken in the same semester.
Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EST 565: Foundations of Technology in Education
Throughout this course students will explore the basic pedagogical issues and social impact of using technology in education. This course examines the basic principles of integrating technology and computer applications into the curriculum. Students will learn how to use and integrate word processing, spreadsheet, and presentation applications for educator planning and student project work. Students will also learn how to use a number of online based Web 2.0 applications within school curriculum. The culminating activity for this course is the design and a presentation of a micro-lesson using one these applications as they would in the classroom.
Fall, Spring, Summer, 3 credits, Letter graded (A, A-, B+, etc.)

EST 568: Networked Communication Technologies
EST 568 Network Communication Wired and Wireless
This course examines the range of technologies used in teaching, learning, and communication. Instructional technologies both stand-alone and networked are surveyed with a focus on how they can be used effectively to enhance learning. Students will learn fundamental hardware and software principles underlying the development of the Internet and other networked communications tools. Emphasis will be placed on assessment of these technologies in terms of societal impacts and learning outcomes. This course combines topics from EST 565 and EST 567.
Fall, Spring, Summer, 3 credits, Letter graded (A, A-, B+, etc.)

EST 569: Technology in the City
Will technology erode our cities, making them more livable, efficient, and desirable? Will technology transform our cities, making them more dangerous, chaotic, and insufferable? This course is at the intersection of two trends. First, the world is undergoing a wave of urban growth. Second, the pace of technological change is quickening and, with it, the pace of social change and even social transformation. Course modules will cover technology and society in urban contexts with particular attention to: 1) energy, 2) transportation, and 4) health and human safety (including security). This class will involve trips to sites in New York City, and will involve the use of IT technologies in creative ways to advance our learning.
Offered Fall, Spring and Summer, 3 credits, Letter graded (A, A-, B+, etc.)

EST 570: Educational Technology Lesson Development
In this course students will learn principles of instructional design and how to fully integrate technology into daily curriculum. Throughout
the course students will plan, develop and evaluate a lesson plan that demonstrates an expertise in the integration of educational technology. Students will apply the skills, techniques, resources and research necessary to effectively create an educational technology inspired lesson plan. The lesson plan may include the use of emerging technologies, distance learning, multimedia projects, collaborative environments, computer applications and Internet resources. The culminating project for this course is the completion of a lesson plan in a specific content area that incorporates multiple modalities of technology into pedagogical practices.

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

**EST 571: Educational Technology Research Methodologies**

This course evaluates the impact and value of educational technology uses through detailed research based on a number of current topics. Course goals include understanding research methodology and literature and exploring assessment design and implementation. The course includes class discussions and project work based on student learning with technology, access and the digital divide, the National Education Technology Plan, Internet literacy, emerging technologies, virtual schools, and data driven research.

Fall, Spring, and Summer, 3 credits, Letter graded (A, A-, B+, etc.)

**EST 573: Interactive Multimedia Curriculum Design and Development**

This course allows students to learn how to use a variety of multimedia tools for the classroom. Principles of user interface and interaction design will be covered. Throughout the course students design an interactive unit plan using multimedia authoring software. Students will work with audio/video editing software, collaborative learning software, and learn how to embed online games, activities and video within their unit plan. Development of the interactive multimedia unit requires students to: submit a proposal, use graphic organizers to plan and design, create a draft version, create assessment tools, test market with a specific target audience, then evaluate the unit before the final version is completed. The culminating activity is the presentation and delivery of the finished interactive multimedia unit.

Fall, Spring, and Summer, 3 credits, Letter graded (A, A-, B+, etc.)

**EST 574: Distance Learning and Virtual Environments**

Web-based distance learning applications are quickly growing within higher education institutions, K-12 schools, and corporate environments. The focus of this course is on the underlying theories, design, and implementation of effective modes of e-learning. Students will explore virtual schools, virtual learning, virtual environments and other forms of distance education. The social differences between face-to-face and virtual learning will also be examined and discussed throughout the course. Students will explore virtual learning resources and design their own virtual learning lesson. The culminating project for this course will be the demonstration and write up of the experience.

Fall, Spring, and Summer, 3 credits, Letter graded (A, A-, B+, etc.)

### EST 575: Developing Grants and Managing Projects

This course will develop the skills necessary to take a program proposal from idea through reality with an emphasis on new technological resources available to help with this process. Topics include: techniques for successful fundraising, grant writing, program design, staffing, publicity and outreach, and reporting and evaluation. It is designed for current educators and administrators as well as students about to enter the education, social service and health fields.

3 credits, Letter graded (A, A-, B+, etc.)

**EST 576: Geographic Information Systems in Education and Research**

Students use Geographic Information Systems (GIS) software to create, manipulate and interpret layers of interactive maps and databases. Students collect and modify geographical materials from the Internet, satellite and aerial imagery, and field data. They design and test scientific inquiry-driven educational modules and/or visualizations for research and analysis on global and local geography, for use in economics, earth science, politics and civic action, history and sociology, global studies, and environmental planning and assessment. Prerequisite: EST 565 or EST 595 or permission of instructor.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

**EST 577: Environmental Information Systems (EIS)**

Due to the complex nature of environmental and spatial data, these systems require state-of-the-art computer technology to achieve environmental science and information technology. This course will address the technical and conceptual bases of data capture, data storage, data analysis and decision support, and metadata management.

This course will address the technical and conceptual bases of data capture, data storage, data analysis and decision support, and metadata management. Environmental Information Systems are concerned with the management of data about the rock of soil, the water, the air, and the species around us.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

**EST 578: Human-Computer Interaction Design for Construction**

Principles of human-computer interaction applied to the design of educational courseware. Usability engineering, with a focus on the audience and learning objectives. Interface design principles. Human computer dialogs. Multimedia as a communication tool, using images, audio and video. Multimodal input devices and strategies. Students will use a multimedia authoring tool to create a prototype of an educational application or learning tool.

3 credits, Letter graded (A, A-, B+, etc.)

**EST 579: Educational Games**

Simulations and computer games as a learning tool. Traditional game and simulation genres, and their appropriate uses in education. Gameplay design. Game development process, from storyboarding to delivery. Assessing games as learning tools. Students will use a multimedia tool to prototype an educational game or simulation of their own design.

3 credits, Letter graded (A, A-, B+, etc.)

**EST 580: Advanced Technology Assessment: Business, Government and Strategy**

This course has a two-fold objective: (1) to help students develop strong conceptual foundations for understanding and addressing issues at the intersection of science, technology, public policy, and business strategy; and (2) to provide students with knowledge of analytical frameworks and tools that are essential to technology assessment in business, government, and government, and other organizations with understanding of their strengths, limitations, and underlying assumptions. Topics covered include utility/profit maximization theory, its limitations and alternative theories, business and government interactions, technology innovation and management, technology forecasting, impact assessment, technology valuation, and basic tools for technology assessment (monitoring, simulation, expert opinion, scenario analysis, cost-benefit analysis, AHP method, etc.).
EST 581: Heuristics and Quantitative Decision-Making
Complex problems (choices) need to be resolved in the course of socio-technical processes. Quantitative decision-making techniques have been evolved to address these situations. We will investigate a number of these techniques in detail, in order to understand the advantages that can be gained by using them. We will also discuss common criticisms and issues associated with these methods, and consider the heuristic methods that are often used instead to resolve complicated problems.
3 credits, Letter graded (A, A-, B+, etc.)

EST 582: Introduction to Systems Concepts
Understanding phenomena as “systems” requires some changes in overall analytical approaches, and a new vocabulary. General systems theory concepts such as feedback, stability, tipping point, resilience, recursion, hierarchy, and complexity will be discussed, with regard to complex systems drawn from nature, business, technology, and education. The course will address the use of feedback, information and communication, structure, and cybernetics in the management of complex systems. The role and importance of “agents” in current systems thinking will be emphasized. Students will prepare a study of a complex system and its management incorporating these general concepts.
3 credits, Letter graded (A, A-, B+, etc.)

EST 583: National Energy Decision Making
Today's decision about fuel exports, power plant siting, and R&D support for emergent technologies often hinge on underlying priorities tied to self-sufficiency and markets, among possibilities. Such dimensions are examined in this graduate course through the lens of diverse players in the national energy system. Competing interests in infrastructure, cost, equity, and societal buy-in will be evaluated with technology systems and policy frameworks. Takeaways will provide a basis for work in the private or public sector. Graduate Students in engineering and science, social sciences and humanities, as well as management are encouraged to join. Semesters Offered: Fall
3 credits, Letter graded (A, A-, B+, etc.)

EST 584: Air Pollution and Air Quality Management
The effects of air pollution on the environment and public health are explored. Primary pollutants, such as particulates, oxides of sulfur, nitrogen and carbon, hydrocarbons, lead and CFCs are considered, as are secondary pollutants, such as sulfuric acid, PAN, and surface ozone. The effect of atmospheric conditions on the dilution and dispersion of pollutants and the impact of pollution on the global atmosphere are explained. Air pollution disasters and the impacts and ramifications of the Clean Air Act of 1970, its 1990 amendments, and recent international accords are discussed. Case studies of air pollution reduction, management, and regulation in local industry are included. Other contemporary topics include the loss of stratospheric ozone and global warming due to human activities.
Cross-listed as EST 584 or HPH 683.
Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EST 585: Assessment of Technology in Learning Environments
This course is designed to provide educators with an overview of the uses of technology to improve instruction. Students will understand the design and function of learning environments, individual applications related to the student’s area of professional practice, and assessment of educational uses of technology today and tomorrow. Students will choose a current technology used in a specific learning environment and analyze and evaluate its effectiveness within instruction including practical classroom use and staff development for the particular technology. Students will then research and make recommendations on how the particular technology could be integrated most effectively to increase teacher understanding and enhance student learning. Students then present their findings about the current use of the chosen technology, possible improvements on its use as well as future technology recommendations.
Fall, Spring, and Summer, 3 credits, Letter graded (A, A-, B+, etc.)

EST 586: Environmental and Waste Management in Business and Industry
Environmental and waste management practices in industrial and other institutional settings. Technologies of hazardous waste prevention, treatment, storage, transportation, and disposal are considered. Topics include information systems and software tools for environmental audits, regulatory monitoring and compliance, cost estimation, recycling programs, air, land and water emissions controls and permits. Employee health, safety, and education and quality management and examined. Field trips to several Long Island institutions.
3 credits, Letter graded (A, A-, B+, etc.)

EST 587: Today's Technology: Impact on Education and Economics
This course involves the student in studies of the science, technology, and economics of four selected areas: electronics, transportation, energy, and health sciences. Classroom time is supplemented by visits to appropriate facilities in each area; individuals and groups also plan for the use of the information in their specific areas of responsibility. For example, teachers are responsible for developing teaching strategies for use of the information in their classes and for student career advice and preparation. Those from commerce and industry learn of the powerful influence of technological development on regional economics. This knowledge is helpful in carrying out strategic planning and forecasting within the student's organization.
3 credits, Letter graded (A, A-, B+, etc.)

EST 588: Technical Communication for Management and Engineering
The ability to communicate technical ideas clearly and effectively is critical to success in management and engineering. Hours and money are wasted when confused, distorted writing and speaking obscure the information they are intended to convey. This course will provide managers, engineers, and other technical professionals with practical methods for making their memos, reports, and correspondence clear, comprehensible, and persuasive. Students learn strategies for communicating with both nonspecialist and technical audiences, stating their purpose clearly, organizing points most effectively, and expressing ideas concisely and precisely. Special attention is given to technical presentations and to communicating in meetings.
3 credits, Letter graded (A, A-, B+, etc.)

EST 589: Technology-Enhanced Decision Making
This course examines the use of technological devices, especially computers, as aids in decision making. A treatment is given of the cognitive science and artificial intelligence methods used in the structure and operation of some systems that support human decision making. Medical diagnosis systems, business and industrial planning systems, and computer-aided dispatch systems are discussed. In addition, the application of high technology in air traffic control systems is examined.
3 credits, Letter graded (A, A-, B+, etc.)
EST 590: Seminar for MS, TSM

Students
A forum for the discussion of research methods, project ideas, and proposal preparation. A final project of this seminar is an approved master’s project proposal. Each student also leads a discussion of an important technology-society problem, such as censorship of the Internet, scientific decision making, or environmental regulations. Each student works with a faculty advisor on background research and preparation of the master’s project proposal. Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EST 591: Independent Study in Technology and Society

The primary objective of independent study is to provide a student with opportunities to interact with faculty members who can be of assistance in his or her master’s project. Students should consult individually with faculty members on workload and credit(s). 1-3 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

The ample supply and appropriate use of energy is critical to the well being of human society. Energy plays an enormous role in environmental degradation, national insecurity, international conflict, and in solutions to these problems. This course aims to introduce the major energy issues to students in engineering, business, and public policy areas. It discusses the energy choices to meet regional and global energy needs. Major renewable and conventional energy sources, energy supply technologies, and end-use efficiency options will be assessed in the context of political, social, economic, and environmental goals. 3 credits, Letter graded (A, A-, B+, etc.)

EST 593: Risk Assessment and Hazard Management

A case-study approach to the assessment of risk and the management of natural and technological hazards, with emphasis on those that can harm the environment. The course focuses on technological hazards involving energy, transportation, agriculture, natural resources, chemical technology, nuclear technology, and biotechnology, and on natural hazards such as climatic changes, droughts, floods, and earthquakes. The first part of the course consists of readings on risk assessment and hazard management and discussions of published case studies. During the second part of the course, students conduct Offered as EST 593 or HPH 686.
3 credits, Letter graded (A, A-, B+, etc.)

EST 594: Diagnosis of Environmental Disputes

Diagnosis of disagreements about environmental and waste problems. Tools for evaluating disputes about (a) scientific theories and environmental models, (b) definitions and analytical methodologies for estimating risk, “real” cost, net energy use, and life-cycle environmental impact, (c) regulatory and legal policy, (d) siting of controversial environmental facilities, and (e) fairness and other ethical issues. These diagnostic tools are brought to bear upon case studies of pollution prevention, recycling, nuclear waste disposal, and climate change. 3 credits, Letter graded (A, A-, B+, etc.)

EST 595: Principles of Environmental Systems Analysis

This course is intended for students interested in learning systems engineering principles relevant to solving environmental and waste management problems. Concepts include compartmental models, state variables, optimization, and numerical and analytical solutions to differential equations. Prerequisites: MAT 132 and one year of quantitative science such as physics, chemistry, or geology; or permission of instructor. Offered as EST 595 or HPH 688. Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EST 596: Simulation Models for Environmental and Waste Management

This course is intended for students interested in developing computer models for technology assessment and for environmental and waste management. Concepts developed in EST 595 Environmental Systems Engineering and Analysis are applied to real-world problems. Techniques in model development are presented in the context of applications in surface and groundwater management, acid rain, and health risks from environmental contamination. Offered as EST 596 or HPH 689.
Prerequisite: EST 595 or permission of instructor Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EST 597: Waste Management: Systems and Principles

Students will learn about the technologies and policy options in waste management, emphasizing recycling, incineration, landfiling, and source reduction options for municipal solid waste on Long Island. Problems concerning paper, glass, plastic, organic materials, and other waste stream components will be explored. Environmental impacts and economics of landfills, materials recovery facilities, and waste-to-energy systems are examined. The institutional and regulatory climate, current and planned practices in the region, and hazardous waste will be discussed. Cross-listed as CEY 597 or HPH 663 or EST 597.
3 credits, Letter graded (A, A-, B+, etc.)

EST 598: Teaching Practicum

Designed to give graduate students teaching experience.
3 credits, S/U grading

EST 599: Special Projects and Topics

A technology assessment laboratory for emerging problems and focused research. May be run as a hands-on, group research study of an important educational, environmental or waste problem (perhaps to provide an assessment to a regulatory agency or administrative system).
1-12 credits, Letter graded (A, A-, B+, etc.) May be repeated for credit.

EST 600: Technology, Policy, and Innovation: Theory and Practice

This course provides students with frameworks and models for analysis of issues at the intersection of science, technology and public policy, and business strategy, and helps students develop skills to work on policy issues that require deep understanding of the technical details. Topics include utility/profit maximization theory, its limitations and alternative theories, business and government interactions, technology innovation and management, policy process (agenda setting, problem definition, framing the terms of debate, formulation and analysis of options, evaluation of policy outcomes). Cases drawn from energy and environmental policy, educational technology, STEM education will be used to illustrate stakeholders and their value structures, high levels of uncertainty, multiple levels of complexity, and their influence on policy intervention. This course emphasizes quantitative policy analysis methods, and critical thinking.
Fall, 4 credits, Letter graded (A, A-, B+, etc.)

EST 601: Grand Challenges in Energy and Environmental Policy

The survey course will be taught by the faculty of Technology and Society and provide an introduction to the major energy and environmental issues of our time. The course
will take an interdisciplinary perspective drawing from policy, engineering, social and physical sciences, the course will cover challenges and opportunities related to society's demand for energy and resources, and resulting environmental impacts. It is a required course for all elective for all PhD candidates and advanced Masters students outside of the energy and environmental program who may take the course with the permission of the senior faculty member responsible for the course. The course will be conducted in a mixture of lecture and seminar styles. An extensive reading list will be provided on each issue. Responsible Instructor: Gerald Hewitt Co-instructors: Elizabeth Hewitt, Gang He

3 credits, Letter graded (A, A-, B+, etc.)

EST 602: Energy, Technology and Society: Energy Nexus Research Frontiers

Energy is at the center of the nexus challenges-energy, water, food, land, environment and development-that human being faces, critical linkages between those issues demand system integrative thinking and of growing interest in research and policy communities. This course will provide a deep working knowledge, technically and socially, of the energy technologies, policies, and transition. This course will survey the energy nexus concepts and principles, introduce tools of analysis, and engage students in case studies of critical energy nexus issues: energy and development, energy and water, energy and food, energy and land, energy and environment, and energy and climate change. This course aims to explore the frontier of energy nexus research and empower students to contribute in the energy nexus debate and policy design.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EST 605: Economics and Public Policy

This course is the second in a two part economics sequence that applies the tools from Part 1 to evaluate sectors of the economy related to technology, public goods, and innovation. Readings cover the literature related to the cross between public economics and technology/innovation. Policies related to technology and innovation enhancements will be assessed using the criteria of effectiveness, efficiency, equity, economic growth, and economic stability. How technology and innovation impact the economy and industry, how well advances are being implemented, will all be examined from the economist's perspective. Pre-Requisite: EST 605, Economics and Public Policy with a grade of C+ or better Fall semester, 3 credits, A, B, C, F.

3 credits, Letter graded (A, A-, B+, etc.)

EST 606: The Economics of Technology, Policy, and Innovation

This course is the second in a two part economics sequence that applies the tools from Part 1 to evaluate sectors of the economy related to technology, public goods, and innovation. Readings cover the literature related to the cross between public economics and technology/innovation. Policies related to technology and innovation enhancements will be assessed using the criteria of effectiveness, efficiency, equity, economic growth, and economic stability. How technology and innovation impact the economy and industry, how well advances are being implemented, will all be examined from the economist's perspective. Pre-Requisite: EST 605, Economics and Public Policy with a grade of C+ or better Fall semester, 3 credits, A, B, C, F.

3 credits, Letter graded (A, A-, B+, etc.)

EST 607: Energy and Environmental Economics and Markets

The landscape of global energy markets over the past decades has largely driven by economics and regulations. This course will draw the theories and tools of economics and regulations to study the evolution of the energy and environmental markets and the policy implications of such evolution. This course will examine the development of energy markets for clean energy, energy efficiency, and transport and storage of energy. This course aims to analyzing the rationale for and effects of public policies in energy and environmental markets.

Spring, 3 credits, Letter graded (A, A-, B+, etc.)

EST 610: Data Analysis for Technology, Policy and Innovation

Common empirical tools used for research in Technology, Policy, and Innovation. Topics include: data collection and sampling techniques, descriptive statistics, probability concepts, estimation, formulating and testing hypotheses, and simple and multiple regression analysis. Discussion of assumptions, strengths and weaknesses of various statistical tools and methodologies. Emphasizes the analysis and presentation of information through visual and numerical means. Use of modern statistical software to analyze real data sets involving socio-technological applications.

Prerequisites: Admission to PhD program or permission of instructor

Fall, 3 credits, Letter graded (A, A-, B+, etc.)

EST 620: Decision Making in Socio-Technological and Global Contexts

Methodologies and applications to enhance students' abilities to use qualitative and quantitative approaches to examine decision problems within socio-technological and global contexts. Psychological, social and cultural influences on decision making in organizations. Power and limitations of the theories, models and tools of decision analysis. Applications to decision problems in a variety of areas, including energy and environmental systems, educational technology and education in science and engineering, technology management, and science and technology policy.

3 credits, Letter graded (A, A-, B+, etc.)

EST 625: Advanced Theory and Practice in Technology and Policy

Technology change entails more than the commercialization of an invention. Likewise, policy making encompasses much more than cost-benefit analysis and regulation. This advanced, graduate level course examines critical theory for both subjects by drawing on ideas from systems and science, policy and management, economics, and STS. Emphasis is placed on deconstructing theoretical applications in the context of policy-based problem-solving and innovation objectives. Topics will include policy cycles, regulatory capture, innovation systems, dimensions of technology change, and lock-in, among others. Students will develop skills to work in roles at the interface of technology and management.

3 credits, Letter graded (A, A-, B+, etc.)

EST 650: Directed Study

Individual studies under the guidance of a faculty member. Subject matter varies according to the needs of the student. May be repeated for credit.

1-9 credits, Letter graded (A, A-, B+, etc.)

May be repeated for credit.

EST 680: Teaching, Learning, and Technology

A professional development seminar that is designed to help Ph.D. students develop the competencies needed to become effective teachers in colleges and universities. Students...
Invention, and Diffusion
A-, B+, etc.)
Offered in Spring, 3 credits, Letter graded (A, A-, B+, etc.)
For managerial and behavioral studies-Yet commonly emphasize empirical research
and technology over the past decade have given us tools to make buildings more energy
efficient, but buildings lag far behind their potential. There are many avenues to green
the built environment sector, including technological innovations, occupant behavior
programs, retrofits of existing buildings, and innovative building codes. Ultimately,
reducing energy consumption in the building stock will require an interdisciplinary
approach and some combination of a range of program and policy types. This
course will introduce students to the many interdisciplinary issues surrounding energy
use in buildings, with a particular focus on the intersection of policy with technology,
economics, social science, and behavior. The course will combine lectures, student-led
practicum discussions, and guest speakers. Possible field trip(s) to green buildings
will be explored, depending on scheduling. Topics covered will include: # Regulatory
schemes such as tax incentives, mandates, and building codes # Voluntary certification
schemes such as LEED, EnergyStar, and their international counterparts # Equity and
environmental justice issues surrounding access to/affordability of green buildings #
Economic issues: Rebound effects, principal-agent misalignments, elasticity of demand
# Architecture, design and engineering innovations # Occupant behavior challenges
# Retrofits and energy efficiency for existing buildings # Distinctions in scales of actors:
Individual, household, building management, organization # Distinctions in sectors
3 credits, Letter graded (A, A-, B+, etc.)

EST 694: Energy and Buildings: Technology, Policy, and Behavior
Graduate Seminar (PhD students preferred; Masters students welcome w/permission of
instructor) Buildings consume vast amounts of energy and resources, and are one of
the largest contributors to greenhouse gas emissions. Major advances in building design
and technology over the past decade have given us tools to make buildings more energy
efficient, but buildings lag far behind their potential. There are many avenues to green
the built environment sector, including technological innovations, occupant behavior
programs, retrofits of existing buildings, and innovative building codes. Ultimately,
reducing energy consumption in the building stock will require an interdisciplinary
approach and some combination of a range of program and policy types. This
course will introduce students to the many interdisciplinary issues surrounding energy
use in buildings, with a particular focus on the intersection of policy with technology,
economics, social science, and behavior. The course will combine lectures, student-led
practicum discussions, and guest speakers. Possible field trip(s) to green buildings
will be explored, depending on scheduling. Topics covered will include: # Regulatory
schemes such as tax incentives, mandates, and building codes # Voluntary certification
schemes such as LEED, EnergyStar, and their international counterparts # Equity and
environmental justice issues surrounding access to/affordability of green buildings #
Economic issues: Rebound effects, principal-agent misalignments, elasticity of demand
# Architecture, design and engineering innovations # Occupant behavior challenges
# Retrofits and energy efficiency for existing buildings # Distinctions in scales of actors:
Individual, household, building management, organization # Distinctions in sectors
3 credits, Letter graded (A, A-, B+, etc.)

EST 697: Directed Study
Topics selected on the basis of the needs of the graduate program and research interests of the
staff.
1-3 credits, Letter graded (A, A-, B+, etc.)
May be repeated for credit.

EST 698: Practicum in Teaching
This course enables graduate students to gain experience in teaching and interacting with
students enrolled in Technology, Policy, and Innovation courses. Students enrolled in EST
698 are expected to perform various teaching duties required by the course instructor, such
as attending lectures, providing office hours, holding review/recitation session, proctoring
exams, grading, etc...
Fall, Spring, and Summer, 1-3 credits, S/U grading
May be repeated for credit.
EST 699: Dissertation Research on Campus
Dissertation research under direction of advisor.
1-9 credits, S/U grading
May be repeated for credit.

EST 700: Dissertation Research Off Campus - Domestic
Prerequisite: Must be advanced to candidacy (G%). Major portion of research will take place off-campus, but in the United States and/or U.S. provinces. Please note, Brookhaven National Labs and Cold Spring Harbor Lab are considered on-campus. All international students must enroll in one of the graduate student insurance plans and should be advised by an International Advisor.
1-9 credits, S/U grading
May be repeated 1 times FOR credit.

EST 701: Dissertation Research Off Campus - International
Prerequisite: Must be advanced to candidacy (G5). Major portion of research will take place outside of the United States and/or U.S. provinces. Domestic students have the option of the health plan and may also enroll in MEDEX. International students who are in their home country are not covered by mandatory health plan and must contact the Insurance Office for the insurance charge to be removed. International students who are not in their home country are charged for the mandatory health insurance. If they are to be covered by another insurance plan they must file a waiver by the second week of classes. The charge will only be removed if other plan is deemed comparable. All international students must receive clearance from an International Advisor. May be repeated for credit. Offered every semester, 1-9 credits, S/U Grading
1-9 credits, S/U grading
May be repeated for credit.

EST 800: Summer Research
May be repeated for credit.
